B-VENT & L-VENT

What's L-Vent For?

If you need to run a new vent for an oil appliance and can run it either through the house or in a chase – though not exposed outside - you can use L Vent instead of Class A Chimney. It costs more than B Vent and less than Class A.

L Vent is NOT for wood burning appliances. It's for venting oil, and it looks like B Vent. The only difference is that it has stainless steel inside instead of aluminum.
